CTS Cloud Communications

CTS Cloud provides a fully featured Unified Communications Solution platform offering future proof options, allowing you the freedom to grow, shift with remote access & home offices, allowing your team to work anywhere while maintaining the professional profile and front-end options you require.

Technology has changed dramatically in recent years and with the introduction of the Fibre infrastructure into New Zealand, Voice over Internet Protocol (VoIP) and many new cost saving opportunities have emerged.

CTS Cloud offers a feature rich VoIP system for your business, to enable you to manage your communications from anywhere. A truly "plug and play" solution.

Adjust account settings on the go from any Internet browser or mobile device. All your office or team need is an IP phone and an internet connection.

Get all the advanced calling features you need to manage your business with Call Forwarding, advanced call routing, interactive voice response and many other features normally only found with private "onsite" solutions.

There are many options available, and some are better than others... Some platforms can be vulnerable to security threats and CTS can ensure that your cloud systems are safe with multiple levels of security available.

Let us audit your phone & broadband bill and show you how easy it could be to reduce your business communication costs, improve your company's profile, efficiency & bottom line.
